2. Signs and Markers

Observed the mine identification signs located at the waste rock site and the main facilities. Both signs contained the required information.

4.a Hydrologic Balance: Diversions

A erosional cut was observed over top of the embankment encasing the culvert by the old truck loadout and slotted road trench. Works were on hand and started making repairs durin the inspection.

4.c Hydrologic Balance: Other Sediment Control Measures

A weak berm was noticed on the ROM bench. Repairs need to be made to prevent water being diverted over the slope.

7. Coal Mine Waste, Refuse Piles, Impoundments

The road on the waste roke pad has been moved to the south and no longer disects the north and south pile. The two piles will now continue to merge until their capacity is reached.
