Ken,

I submitted the water data, via the DOGM Program last March, for the 2012 4th quarter. Everything went through great and I okay'd the samples to be uploaded by the Division. I recently logged on the database and found that all of the 2012 4th quarter info is still there and that I have 3 samples that are now not okay'd for upload. The error indicates that the sample, date, time, etc., already exists in the database. I'm concerned about having time before the end of the quarter to enter in the 2013 1st quarter samples.

If the issue continues, I request an extension for the 2013 1st quarter entry.

Please let me know if things are corrected.

Thanks for your help,
