Good morning Ken,

We received your letter regarding the Deer Creek mid-term deficiency response. The Division agrees and acknowledges that the deficiency relative to bonding has been addressed with the removal of the Waste Rock Site and the Phase III bond release for the Left Fork portals.

However; the deficiency identified for Revegetation Standards for Success remains outstanding (See below). The information that was provided to the Division has been informally reviewed; however, it needs to be formally submitted for incorporation into the approved Mining and Reclamation Plan (MRP). The information includes: the detailed seeding area map and the Mt. Nebo Scientific report.

Please submit this information as soon as possible with the requisite C1/C2 forms executed so that we can process the updated vegetation information and get it into the permit. Feel free to contact myself or Todd Miller if you have any questions.

Regards,
Steve

Reclamation Plan Revegetation Standards for Success

Deficiencies Details: The MRP does not meet the State of Utah R645-301-356 requirements for revegetation standards of success. The following deficiency must be addressed.

R645-301-356 and R645-301-121: The vegetative reference area topic needs to be updated and clarified in the MRP to reflect the current plan following the effects and changes from the forest fire and USFS work. A new reference area for white fir/aspen must be identified and defined. A map must be provided that shows the location of updated reference areas, what vegetative community they represent, what seed mix they correspond to, and which areas they will be used in for reclamation. An accompanying narrative is also required to update the MRP to reflect changes made to the reclamation plan. tmiller

Keenan,

This is in response to your e-mail earlier today.

Thanks,

Ken
