Attn: Mr. Thompson

Re: Exploration Permit for Cottonwood Portal

Gentlemen:

This is to advise you that the work requested by Mr. Thompson relating to sediment control at the Cottonwood Portal site has been completed. In accordance with Mr. Thompson's request, three small sedimentation ponds were constructed to control the runoff water from the affected area. Any water that overflows the ponds and leaves the area must pass through straw bales that are anchored onto the spillways. A culvert was installed immediately below the last spillway so that the water will cross under the road and be discharged into the creek. The ditching system has been reconstructed with berms on the roadside edge to stop snow removal efforts from destroying the ditches.

I am advised that the work was completed on March 10, 1980, and, accordingly, request that Mr. Thompson or another representative of the Division inspect the project area.

If you have any questions, please contact the under-
signed or Mr. Gurr.

Very truly yours,
