Mr. C.E. Shingleton
Utah Power and Light Company
1407 West North Temple
P.O. Box 899
Salt Lake City, Utah 84110

Dear Mr. Shingleton:

The administration of the two (2) sedimentation ponds below the Wilberg Mine site lies with the Forest Service. A hydraulic review of the as constructed sedimentation ponds and drainage features must be submitted to the Forest Service to verify that the constructed facilities can adequately handle the volume and flows of water and sediment without erosive damage.

An embankment analysis of the sedimentation ponds must also be made to verify that an adequate safety factor for the modified structure would develop under the design loading. These analyses must be submitted prior to issuance of the Special Use Permit.

Sincerely,

William H. Boley

for
REED C. CHRISTENSEN
Forest Supervisor
