REGARDING: NOV N86-9-2-2, 1 of 2  
Abatement Plan

DIVISION OF  
OIL, GAS & MINING

Dear Mr. Braxton:

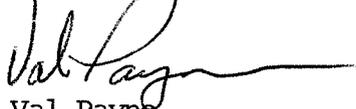

The following measures are proposed to achieve abatement of the subject NOV: (Hydrologic analysis for this area was submitted in the abatement plan for NOV N84-7-10-1.)

1. Two (2) slotted drains will be installed at the locations indicated on the attached map. The drains will be square in cross section with a width and depth of 12 inches. A removable metal grate cover will facilitate cleaning as necessary. The drains will be installed on a minimum slope of two percent.
2. Culverts (minimum diameter of 12 inches) will be installed from the slotted drain discharge into the sediment pond.

The majority of the coal accumulation occurs from the truck loadout down the right fork of the haulroad for a distance of approximately 300 feet. Very little material accumulates below this point or along the left fork of the road. The location of the slotted drains is such that the problem area will be effectively treated; therefore, further treatment is not proposed. If continued monitoring of the area indicates that additional measures are necessary this will be addressed at that time.

Should you require additional information please call me at (801) 687-9821.

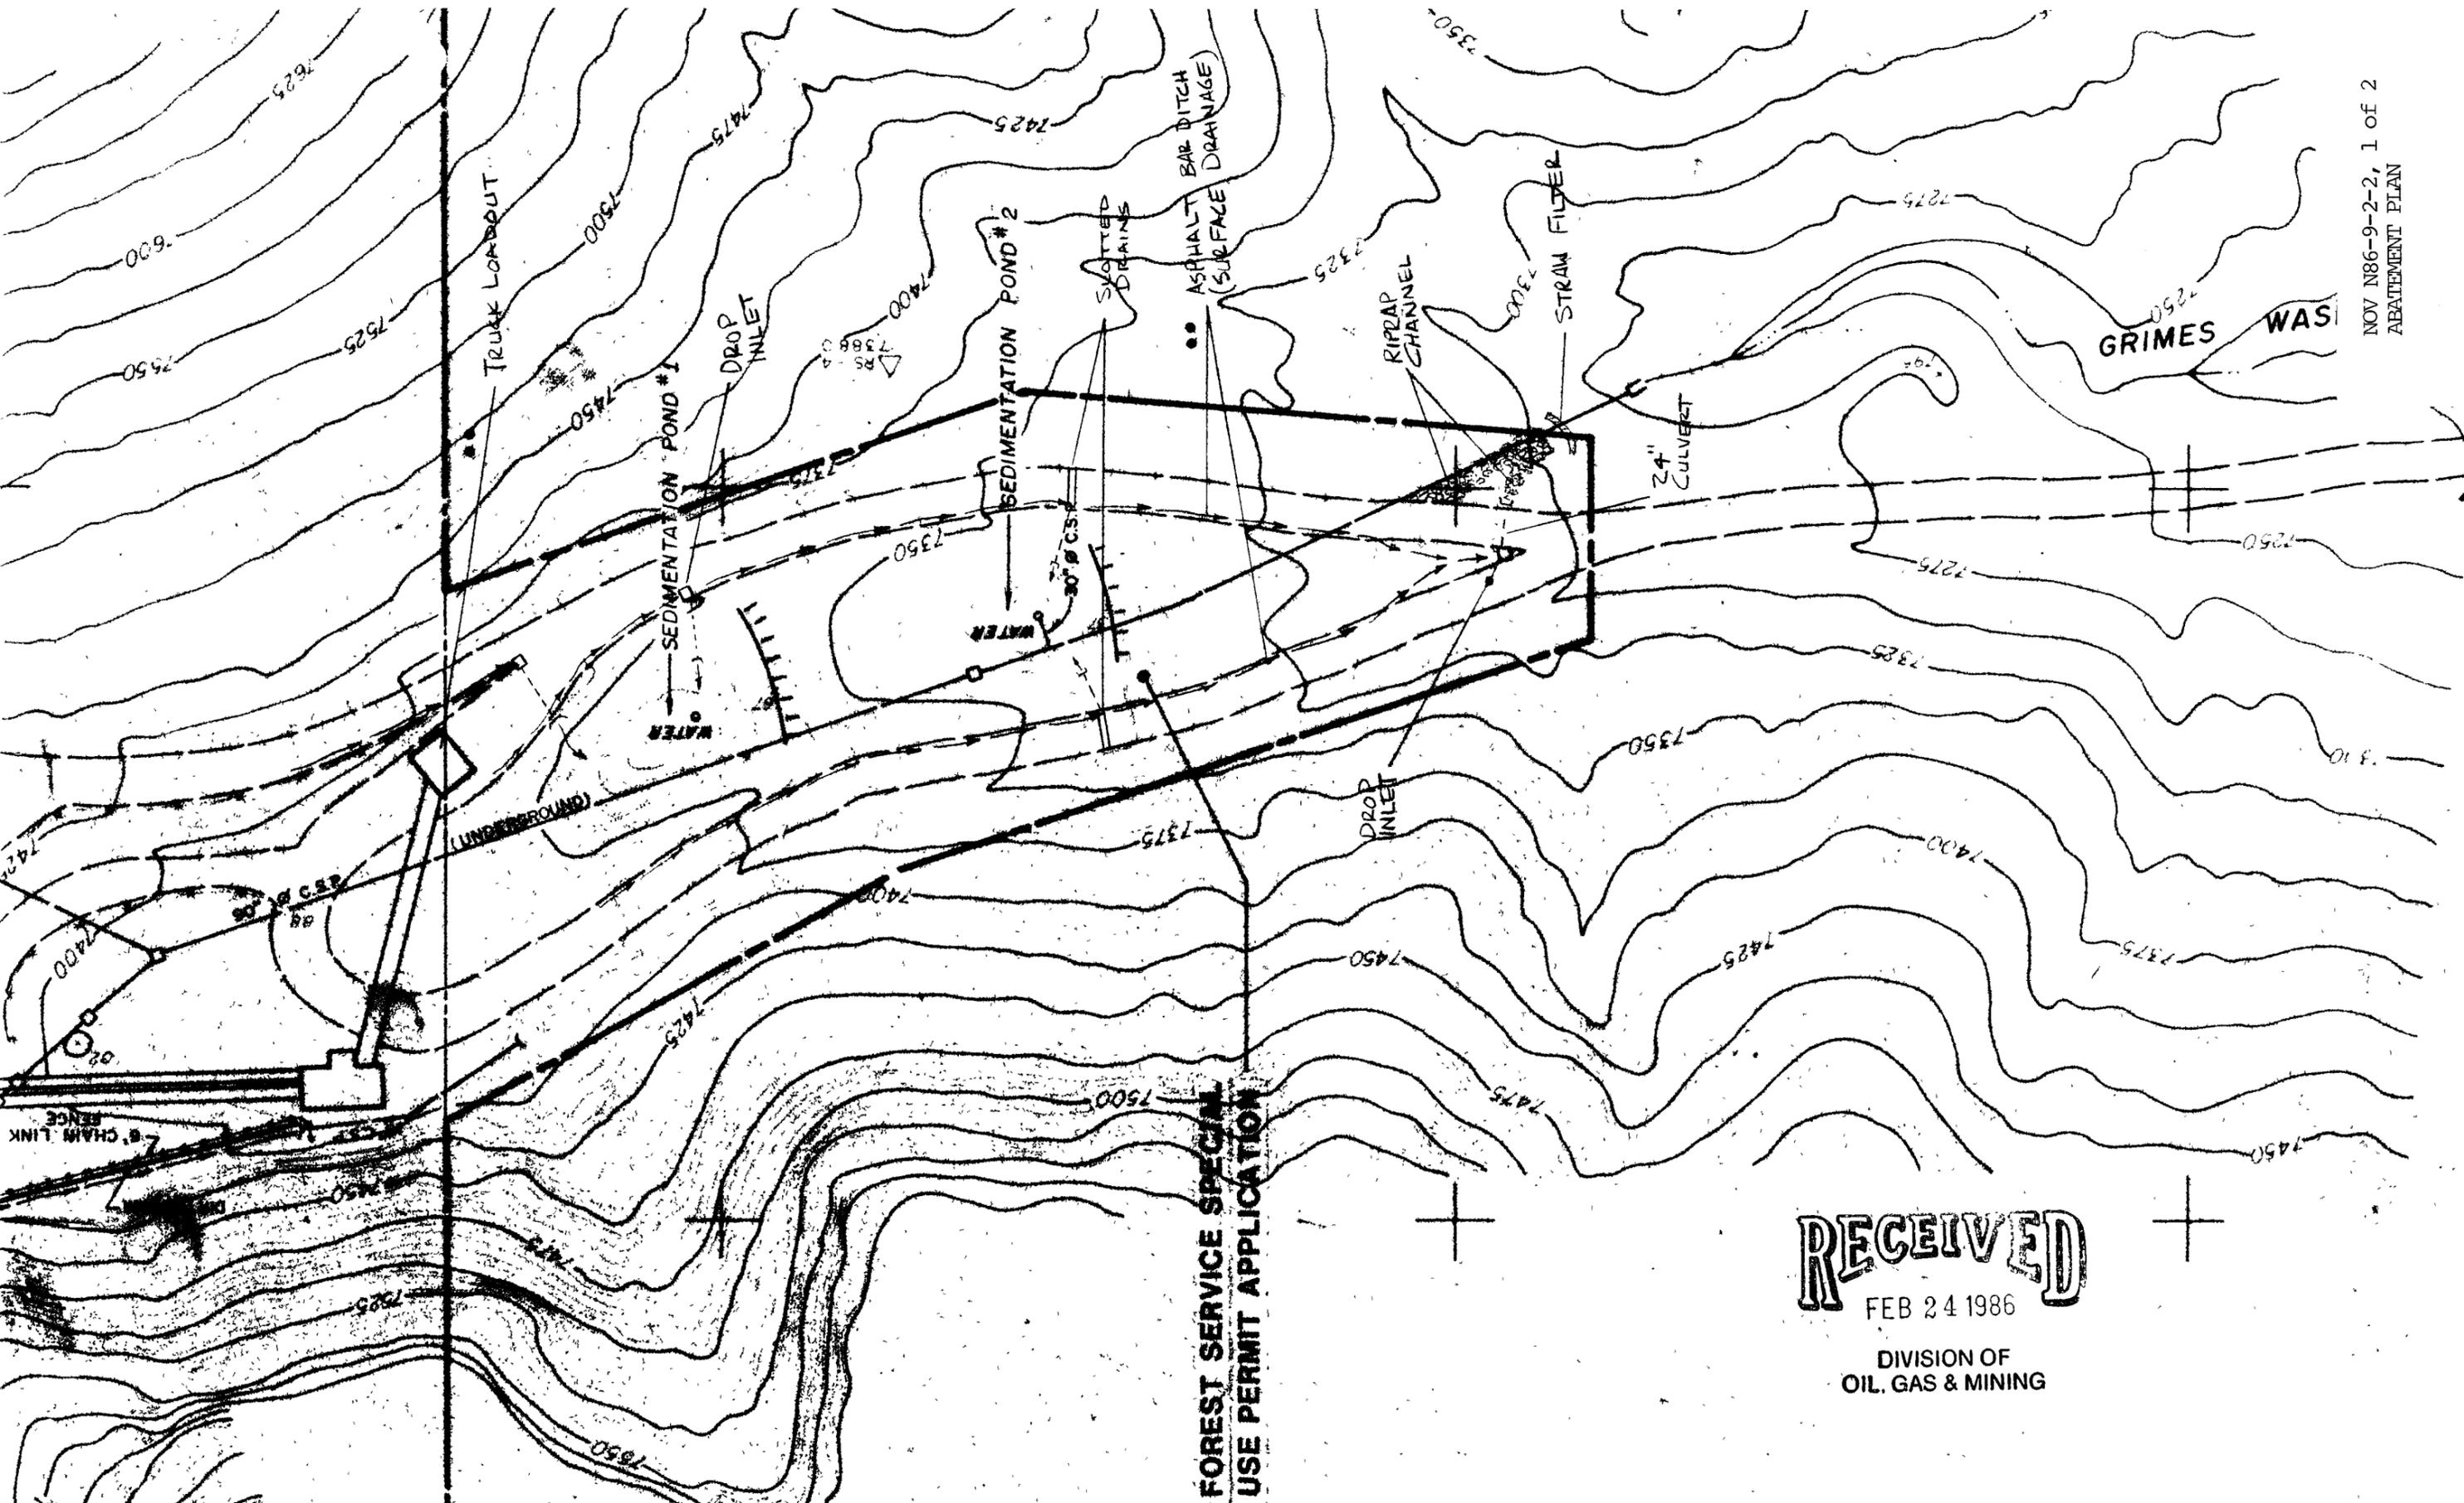

Sincerely,

A handwritten signature in black ink, appearing to read "Val Payne", with a long horizontal flourish extending to the right.

Val Payne
