Jim,

You are correct in your findings. A decimal point was inadvertently placed. The value should have been 901 mg/L. I will also fax you a copy of the July report.

Sorry for the inconvenience!

Dennis,

TDS on the July 2000 DMR for UPDES 0022896-001A at CWW was reported as 9.01 mg/L: this is two orders of magnitude below most other reports for this site. Was there a misplaced decimal point?

I couldn't check this against the water quality report for that month because I couldn't find our copy! Could you send another copy of the lab's water quality report for July 2000 at UPDES 0022896-001A?
