Subject: Rock Slide at Bear Canyon #1 Mine

Pam.....

As you are aware, CW Mining reported a rock slide on 5/19/2004 at 8:20 AM. According to Mark Reynolds, the slide affected the riparian area associated with the #1 Mine. They will be conducting a raptor survey this afternoon and intend to take pictures of the area. I asked Mark to locate the slide of the affected area on a mine map and forward that information to the Division. I will follow-up as soon as possible with a site visit.

This E-mail is significant and should be filed according to Division protocol.

Thank you.
