Subject: Map/Plate Deficiencies (Revised)

Mark,

As promised during this afternoon's conference call between you, OGM, BLM and USFS staff, I have revised my 1/4/2007 email to reflect the clarification and agreement reached concerning the map deficiencies. We agreed to eliminate item #3 from the deficiency list as being unnecessary, provided the other 2 deficiencies are met. The R2P2 tank seam mine projection map (Plate LMU-3) will stand alone as is and will not need to be used as basis for making corrections to the other plates as we had requested in the 1/4/2007 email. Accordingly, please address the following two deficiencies as part of your upcoming response that you anticipate sending to us next week.

1) **All** maps/plates showing contours including overburden maps and the structure contour maps for each of the respective coal seams must have the contours corrected where faults and/or graben areas are shown crossing the Mine permit area. The Mine permit area must include the proposed lease additions.

2) C.W. Mining has informed the USFS that Plate 5-3A, Subsidence Map (Confidential) is the best reflection/information currently available to show the true surface contours. The latest version, as submitted to the USFS on 12/22/06 is considered to be correct/true.

In consideration of this, **ALL** maps/plates which show structural contours and overburden contours must be corrected to show the same contours as Plate 5-3A (12/22/2006 submittal to USFS).

ALL corrected maps/plates must be submitted to EACH of the reviewing government agencies so that we are all evaluating the same information.

Thank you for your cooperation in this regard. If you have any questions please contact me or Joe Helfrich, project lead at (801)538-5286 and 538-5290 respectively.

Sincerely,

D. Wayne Hedberg
Permit Supervisor
Division of Oil, Gas & Mining
Coal Regulatory Program
