Melissa,

I've had the time to look over the 4th Qtr data more thoroughly and the following parameters appear to be missing:

Baseline ammonia (NH3) wasn't reported for:

- SBC-22
- SBC-18
- SBC-16A
- SBC-16B
- SCC-2
- MH-2
- FC-4
- FC-3
- FC-2
- CK-2
- CK-1

At MH-2, in addition to NH3, the following baseline parameters are missing: As, B, Cd, Cu, Pb, Se, Zn, Al, Mb.

Also, please double check the lab sheets for SBC-4 and SBC-5, because oil and grease was reported as 0 (zero); oil and grease wouldn't normally be done on those springs, and if the test were done the lab should have indicated the result as < xx, where "xx" is the method detection limit (MDL).

Thanks,

JIM
