CULTURAL RESOURCE

DETERMINATION OF EFFECT

Emergy Co.

Having carried out a cultural resource investigation of the proposed Crandall Canyon Coal Mine Site project, the USDA Forest Service, Intermountain Region, has determined that there will be no, no adverse, adverse, effect on cultural resources in the project area. This determination is based upon evidence that:

- The project will not effect cultural resources.
- There are no sites present which are eligible for inclusion in the National Register of Historic Places.
- There are important sites present but modification of the project is sufficient to avoid adverse impacts.
- There are sites present whose major importance is the scientific information they contain. Salvage of this data is adequate mitigation of possible impacts.
- There are sites present which appear to meet the criteria for inclusion in the National Register.
- There are sites present which are listed on the National Register.

As the State Historic Preservation Officer for UTAH, I have reviewed the documentation provided concerning this project.

- I agree with the Forest Service determination above.
- I do not agree with the Forest Service determination for the following reasons:
