RE: Permit # ACT 015-032
Genwal Coal Company
Concrete Containment for Bulk Oil

Dear Mr. Summers:

This letter is a follow-up to our telephone conversation of October 11, 1990, in regards to the above-mentioned item.

As you are aware, we are extremely limited in our outside storage area at our mine site; therefore, we are trying to be as creative as possible to utilize space. With our on-going efforts to make our mine site a better place to work and to become more efficient, we are requesting permission to install a bulk oil storage area just west of our present loadout facility. To utilize this service we have purchased a mobile service truck to help increase our underground maintenance in this area.

Our present system is limited to the use of five gallon containers which must be individually handled and disposed of. If the old generator shed is replaced with a new shop/storage building, we will then need a new oil storage station. The present one, which is in poor condition, is built on the east end of the shed with cement block walls for containment.

The new proposed project will meet all the fire codes and containment regulations. The recommendations for the containment structure from Rhinehart Oil are: 4 1/2" wide walls, 2' high, 13' wide, 16' long, and capable of containing 3,000 gallons of oil. The floor of this storage station will be poured concrete with the walls constructed of either cement or fully grouted cement block. This station will surround four tanks that are contained within it. See attached drawings on floor, wall, and tank placement.

The proposed location of the project has been drawn on the latest surface facilities map and will not disturb any of the present drainage or vegetation within our permit boundary.

Mr. Rick Summers

Because of the limited time left in this construction season, the approaching weather, and freezing temperatures, we are wanting to proceed with this project as quickly as possible in order to complete it during this season. Your prompt and timely response to this matter would be greatly appreciated.

Should you have any questions or need additional information, please contact me at 687-9813.

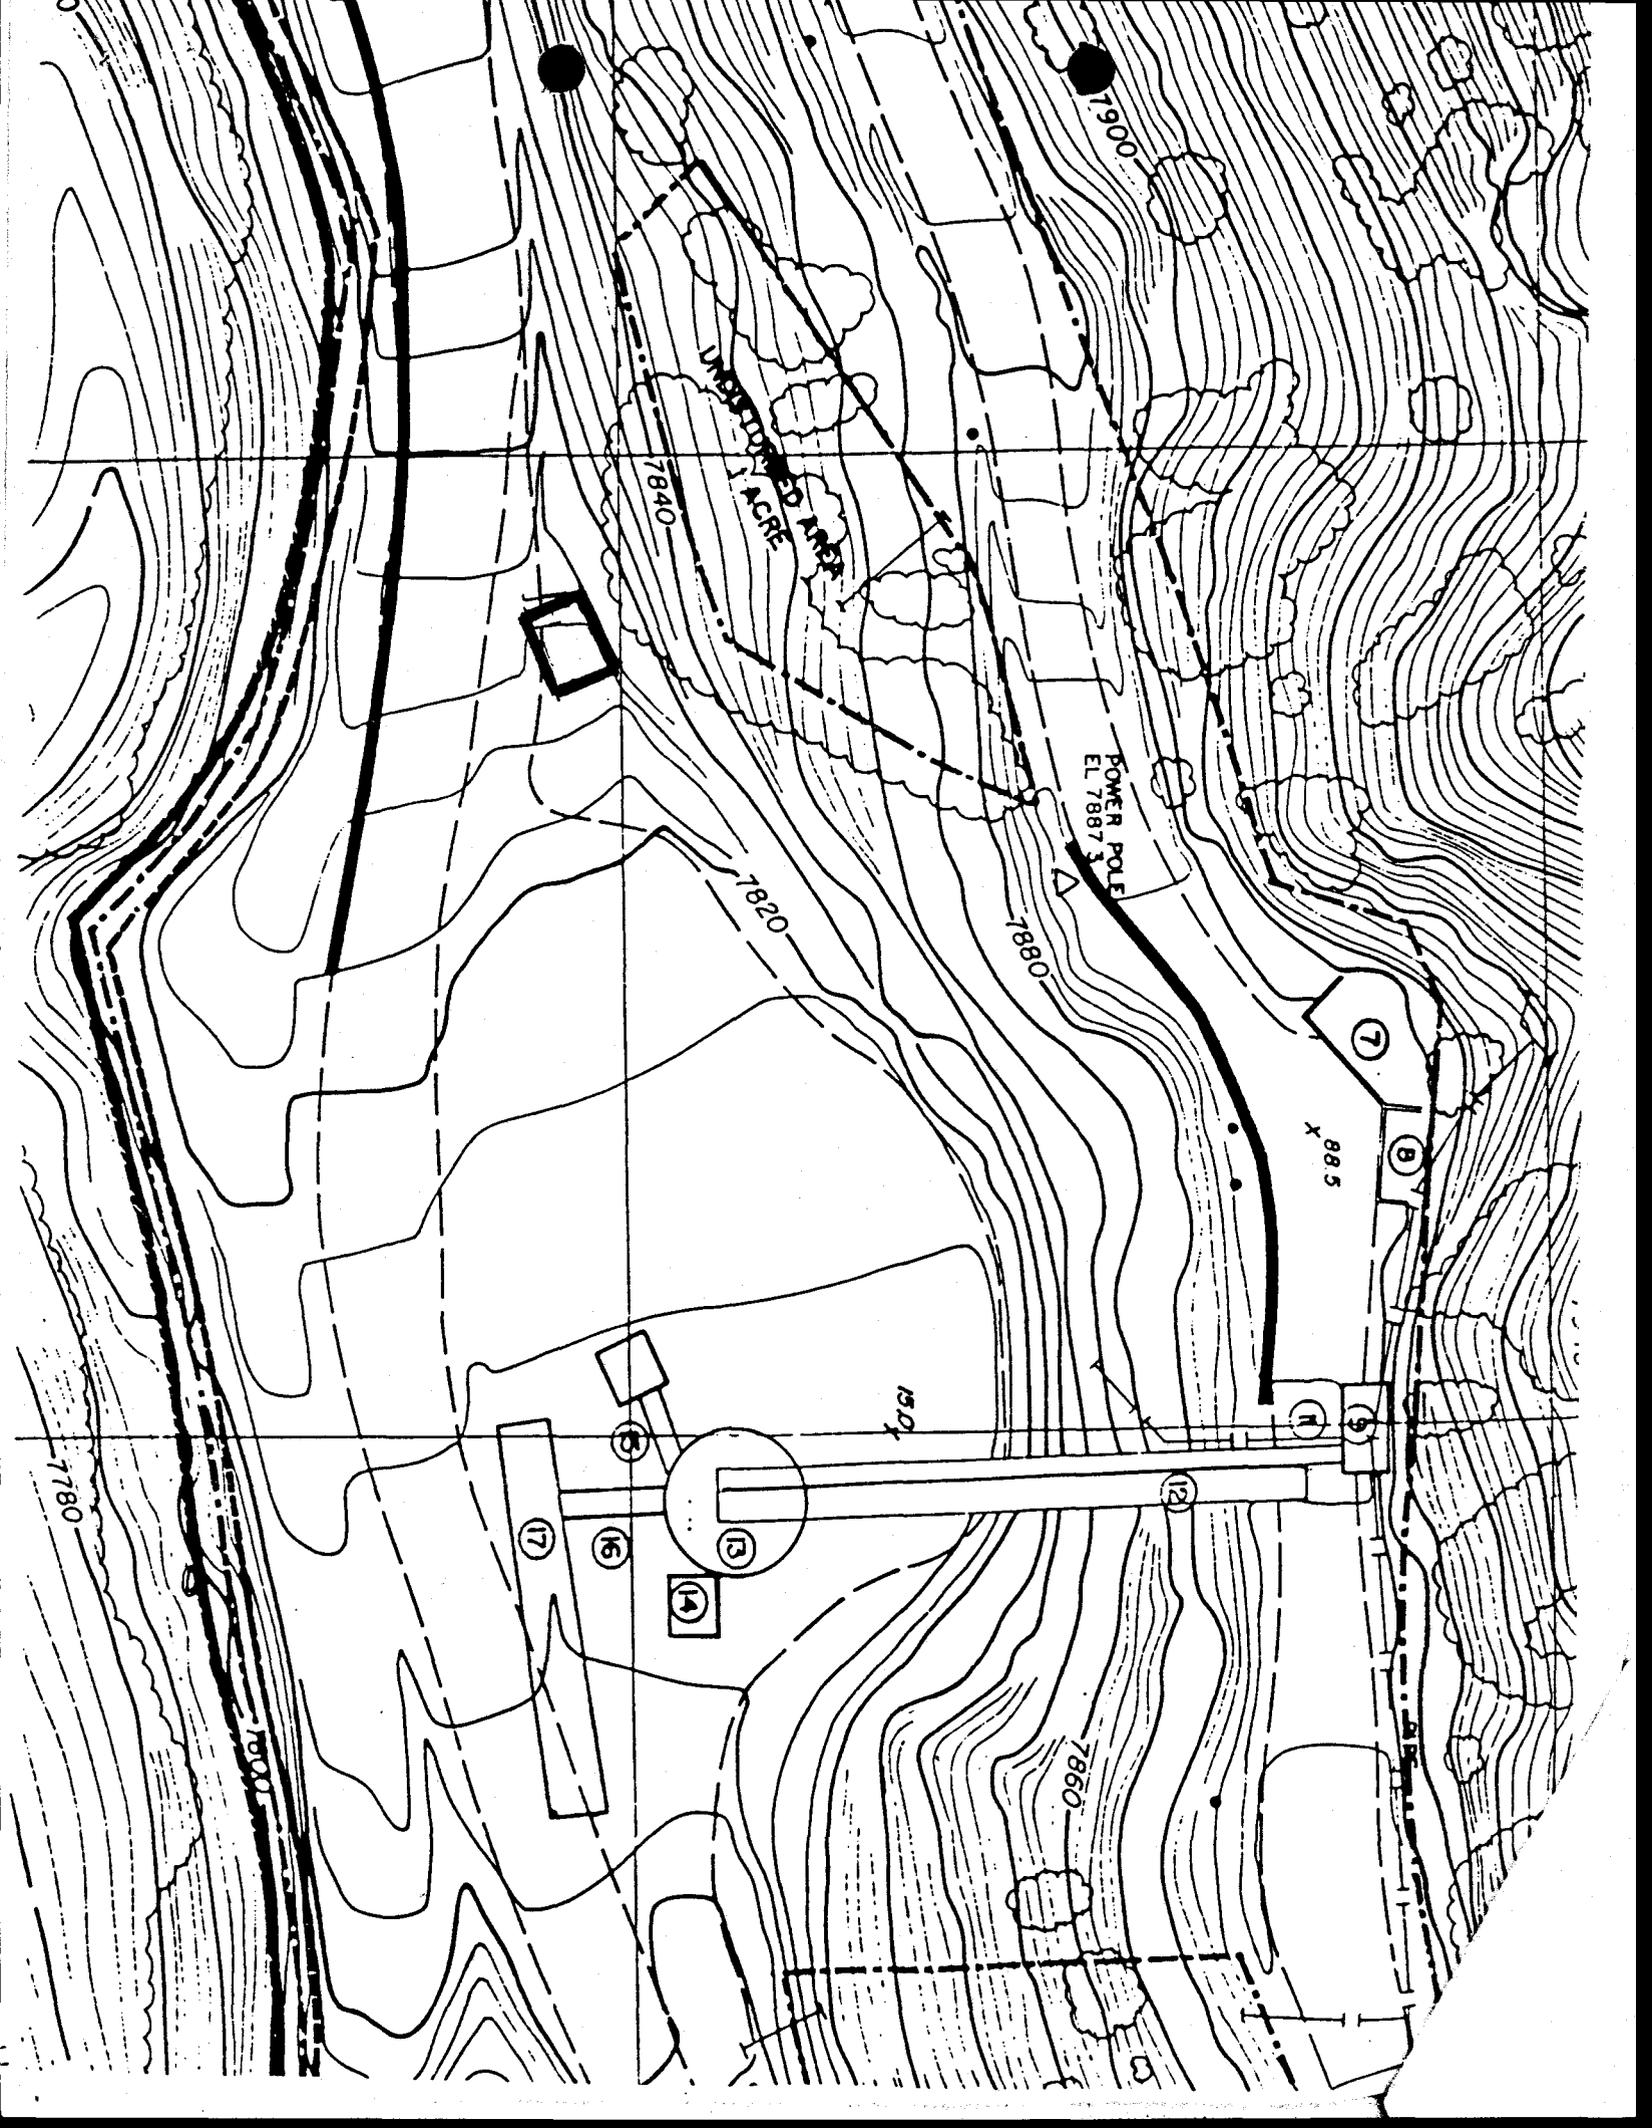

Sincerely,

Randal J Ralphs
Surface Foreman
