

4.0 CRITERIA

Genwal Coal established the following criteria for this study.

- 1) Three overcasts shall cross over the ROW (or under).
- 2) Cross-sectional area of each overcast is to be 18 feet wide by 6 feet high. Based on drilling, this is the same or greater height than the coal north of the proposed ROW.
- 3) No air leakage shall exist between the Genwal workings and the crossover.
- 4) This estimate shall assume there are six Genwal entries to be crossed. These entries will be 20 feet (maximum) wide by 10 feet high, with 60 foot pillars between them.
