Subject: Mine Water NOV

I have been informed by the maintenance department that the mine water discharge has been re-piped to discharge to the UPDES 002 discharge point. I will be getting samples for the UPDES permit requirements. The re-piping was accomplished late in the day on 2/14/2003. This should abate the NOV. We still want to pursue the permit change, but without the FTA hanging over our heads.
