Subject: Genwal Plugging Plan

Priscilla,

The September 26, 2007 plan submitted by Dave Shaver of Genwal Resources, Inc. for plugging the "rescue" drill holes located on trust lands at the Crandall Canyon mine are agreeable with SITLA.

SITLA will not have a representative on site during the plugging operations, although DOGM may choose to witness the work for SITLA. In-lieu of witnessing the plugging SITLA will accept a certified drillers report of completion for each of the drill holes that are plugged upon SITLA lands.

Adam Robison is representing SITLA with respect to surface reclamation of the drill sites and access roads and has been working with the other agencies in this regard.

Plugging of the holes on SITLA lands may proceed upon final approval of Genwal's plugging plan by DOGM. Please advise Genwal Resources, Inc. accordingly. Thank you for your assistance in this matter.
