Darron...I had planned to hand-deliver the revised Crandall Canyon Reclamation Plan amendment to you early this week, but as you know from our previous discussions, the MSHA letter mandating the GVH at West Ridge has taken highest priority company-wide, due to threat of halting longwall production soon from Panel 13, and the safety implications of the methane liberation issue. I have embarked on an urgent permitting effort and hope to get the GVH amendment submitted to you within the next several weeks. This time is needed not only to do the text changes but to get the aerial mapping completed, and get the necessary baseline studies and surveys in order, and generate the additional drawings. Due to the importance of this permitting action, I respectfully request an additional extension of the Crandall reclamation plan amendment until I can get the West Ridge GVH submittal to you. Please note that I have already completed much of the text and drawing changes for the Crandall amendment, but had to drop everything once we received the MSHA notification about West Ridge. I will very much appreciate your understanding in this situation. Thanks

Dave Shaver
