---

Dana,

I'll work on getting the two additional monitoring sites (sandstone seep water and pre-Maelstrom unit) added to the database. I tried to add them this afternoon, but as luck would have it (particularly as of late), my database software isn't functioning correctly. I'll keep at it and let you know when I get them in there.

Talk to you soon,  
Steve

Dana,  
Steve Christensen is the hydrologist for Crandall. I've copied him on this reply.

Thanks,  
Kevin

Hello Kevin,

Are you now the hydrologist for Crandall?  
Please see the question from Karla below...

"Do you know if DOGM is expecting the data from the two new Crandall sites (002 pretreatment and the blue pipe) to be entered into the electronic database along with the other DOGM and UPDES data? If so, you will need to get DOGM to set up the database to receive data from those two sites. Mostly, it requires them to assign the two-digit site codes for each new site."

Thanks,

*Dana Marrelli*
