4.b Hydrologic Balance: Sediment Ponds and Impoundments

Viewed the sediment pond and the iron laden sediment and water being placed in the sediment pond from cleaning of the iron treatment pond. Pictures were taken and uploaded to the picture database. The water level of the pond is 3.9' below the 10 year 24 hour marker. The measurement was taken from the top of the red band to water level. The water in the pond is chocolate in color from the advent of recent rain storm events. Orange laden (iron) sediment water from the iron treatment pond cleaning was observed at the entrance diversion into the sediment pond, but dissipates into the chocolate colored water immediately upon entrance.
