Subject: 0150032 Crandall Canyon Mine East Mountain Reclamation

Hello Daron,

I received a telephone message from Dave Shaver yesterday, responding to our letter dated November 15, 2011, requesting confirmation of the reclamation completed on East Mountain.

He confirmed that backfilling and grading of the road was completed to the red gate on USFS land, seeding was completed along the full length of the road on SITLA and USFS lands, and scattering of wood-straw along 75% of the road. He indicated that there was two feet of snow on the ground when the crew left the site. A hand crew will return to the site next year to flatten out a trail and finish scattering straw. The remaining work is expected to take 10 days or so.
