Greetings Jim,

Could you please make the following entries into the EDI for Coal Hollow:

C5-130, monitored on 3/19/09, water level is -22.4 feet  
C5-130, monitored on 5/25/09, water level is -19.6 feet  
Y-61, monitored on 12/30/07, water level is -12.5 feet  
SP-6, monitored on 12/30/08, flow is <1 gpm (no outflow)  
Sorensen Spring, monitored on 6/22/07, flow is <0.5 gpm  
SP-16, monitored on 12/30/07, flow is 1.52 gpm  
SW-3, monitored on 6/18/08, Temp is 20.5 degrees C  
SW-8, monitored on 5/25/09, Sp. Cond. is 501 uS

These data were all previously collected as part of baseline monitoring activities at the Coal Hollow project. The data reported here were all collected by me and the information was recorded appropriately in the field. A value for the water level at Y-61 was previously recorded in the EDI incorrectly due to a typographic error. The water level for Y-61 on that date is correctly reflected in Figure 17d of Appendix 7-7. The other 7 data items were not previously entered into the EDI due to clerical oversight.

Thanks for your help,

Erik
