Erik Petersen called in today to report that spring SP-3 located south of the permit boundary in the southern portion of Sink Valley was recently developed with a pipe running down the canyon from where the spring originated. Erik was not able to find the outfall to this modified spring in the bad weather and could not collect a sample for 4th quarter 2011.

I told Erik to GPS the new location of the outfall the next time he is due to sample and then submit a map with the relocated spring's outfall point.
