Good afternoon, Jeremy. The Utah coal regulatory program (UDOGM) is in the process of reviewing a permit application for Alton Coal. The mine operation is proposing to lease lands held under fee-simple ownership and mine coal also held under fee-simple ownership.

The parcel in question does contain known archaeological sites, and the proposed mine operation will have adverse effects to these sites. UDOGM have already initiated SHPO consultation according to Utah State Code as required for projects requiring state permitting actions.

In conversations Steve Christensen (UDOGM) had with Nicole Caveny (OSMRE), Nicole seemed to think this would remain a state-level permitting action, meaning we comply with Utah codes/regulations/SHPO process. Here is my question for you: Is there a Section 106 trigger for this action?

Please be in touch if you have additional questions, or if more info would be useful. Your input is appreciated! - JfM

Hi Jessica,

Yes,

Everything you've said indicates to me that it is a state project and not a federal undertaking. So it should follow whatever state law, to include the state regulatory law and whatever historic preservation laws may be in place.
