Team,

Please see the attached photos depicting work being performed to rectify unprotected topsoil on the highwall slope of Pit 6 at the North Private Lease of Alton Coal Development's Coal Hollow Mine. The topsoil stockpile and underlying soils (including the topsoil berm) are being removed in front of the advancing pit highwall and direct placed on reclaimed ground where possible. Once soils have been completely removed from the full footprint of Pit 6, the remaining stockpile will be regraded and bermed as required by the MRP. This work is expected to be complete by the on or before the 16th of December, 2016 Let me know if there are any further questions or concerns.

Thanks and Regards,

Andrew Christensen - Technical Services Manager

Alton Coal Development
