Hi Erik,

I'm following up on our conversation regarding the placement of the up-gradient monitoring well. As we agreed the location will be just south of the farm road, where the farm road is tangent to the perimeter of the center pivot in the field to the north. Or directly north of the monitoring well NLP-1, just south of the farm road, and in a location where it will not be disturbed by operational mining.

I've attached a map showing this location as well.
