Hi Kirk and Erik,

I'm going over the Third Quarter 2018 water monitoring data and Y-102 shows a -3 value. This value is not realistic and must be corrected. Let me know what the correct value is and I can enter into the database. Pond 7 flow also is missing for August 2018.

It's probably getting time to update the MRP and water monitoring program to indicate which well monitoring sites have been mined through. Also, the pumping wells need to be added to the MRP.

Alkali seep is categorized as a spring in the database. Is there an issue with uploading data to it?

Thanks,
Keenan Storrar
