Inspection Memo  
to Coal File:

RE: SUFCO  
Convulsion Canyon Mine  
ACT/041/002

The above mentioned operation was inspected by Tom Suchoski of the Division staff on February 20, 1980. Mr. Suchoski was accompanied by Mr. Kerry Frame of Southern Utah Fuel Company.

No violations were issued, though several areas of concern were indicated:

1. The pad area near the exhaust fan above the shop facilities needs to be regraded to prevent ponding of runoff water.
2. The mine water discharge facilities need to be upgraded to control oil and grease discharge.

Several areas addressed by previous inspections still need to be completed. This is not the operators fault. The Division and the Office of Surface Mining have not finished reviewing the plans submitted by SUFCO required as abatement procedures.

THOMAS J. SUCHOSKI *TJS*  
RECLAMATION HYDROLOGIST
