Mr. Jim Smith
Division of Oil, Gas and Mining
4241 State Office Building
Salt Lake City, Utah 84114

Dear Jim:

Our responses to your most recent Apparent Completeness Review (ACR) and to your more recent Determination of Completeness Review (DOC) proposed several minesite modifications to our sediment control system. The construction modifications include:

1. Installation of bypass diversions and drainage collection devices at the substation.
2. Installation of bypass diversions near the south end of the parking lot on the east side road.
3. Installation of alternative sediment control devices in three proposed small areas for exemption from the main sediment system.
4. Modifications to the sediment pond standpipe and holding capacity.
5. Installation of a pump and pipeline between the concrete settling basin and the mine to permit small flow discharge of surface-area runoff into the mine water treatment system.
6. Modifications to some drainage patterns from the adjoining undisturbed areas.

The Division's present time schedule anticipates final plan approval on September 23, 1983 which is essentially at the end of the 1983 construction season.

We therefore request early review and acceptance by your staff of the above proposals in the final plan and subsequent permission to proceed with construction. Notification authorizing us to proceed must be received by July 25, 1983 to allow completion of construction this year. Without these modifications, water quality compliance problems are sure to develop during the 1984 spring runoff event.

Yours very truly,
SOUTHERN UTAH FUEL COMPANY

Ken Payne
Vice President and General Manager
