RE: Mid-Permit Term Review, Southern Utah Fuel Co., ACT/041/002

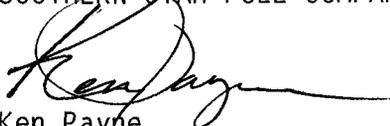

Dear Ms. Linner:

The three areas needing further clarification and discussed in your December 21, 1989 letter have been addressed as follows:

- 1) The surface and ground water monitoring program has been reviewed and revised. Six pages in the 1981 submittal located in the back of Volume 4 have been revised. The revised pages are included for your review and approval. The labeling discrepancy between the Map 2 of the Waste Rock Disposal Site and the water quality report has been corrected. A copy of the fourth quarter monitoring report is included. Flow data for sites 021 and 062 have been included where available in the fourth quarter monitoring report.
- 2) Flow data for NPDES discharge point 003, sample station 021 is included from May 1983 through December 1989. Prior to May 1983 flow was estimated based on pumping curves. A V-notch weir and standpipe were used to estimate flow from May 1983 until November 1987 when a single V-notch weir was installed to determine flows. At that time, it was determined that the stand pipe formula previously used had greatly overestimated the flow. The data presented in the accompanying graph and table reflects "calibration" of the stand pipe flow rather than the original reported flow. The table and graph will be incorporated into the water quality data report as an appendix to station 021.
- 3) Map 83-5 has been revised to include certification of the as-built sediment pond volume. A certified copy of the map is included for your review.

Please review these revisions and approve for incorporation into Southern Utah Fuel Company's Mining and Reclamation Plan.

Sincerely,
SOUTHERN UTAH FUEL COMPANY

Ken Payne
General Manager and Vice President
