DIVISION OF
 OIL, GAS AND MINING

Dear Mr. Shaver,

On December 23, 1998, WEST RIDGE Resources, Inc. and PacifiCorp entered into a Master Electric Service Agreement for the new WEST RIDGE mine. Under the terms of this agreement, PacifiCorp will construct a 7.05 mile 46 kV power line to the WEST RIDGE mine substation. The line will be owned, operated and maintained by PacifiCorp as part of our company wide transmission and distribution system.

As presently designed, there will be two pole structures located within the WEST RIDGE mineyard disturbance area. These are structures #86 (station 344 +34.0) and #87 (station 348 +28.7). PacifiCorp understands and acknowledges that at the time of final reclamation of the minesite, these two structures will have to be removed to accommodate the objectives of reclamation. PacifiCorp hereby grants permission to WEST RIDGE Resources to coordinate the removal of these structures with PacifiCorp in the future as necessary for the purposes of final minesite reclamation. This letter, and the permission granted herein, are considered a valid supplement to the aforementioned Master Electric Service Agreement.

Any questions regarding this letter should be forwarded to my attention.

Sincerely,

Aaron Gibson
 Account Manager
