Priscilla.....

Mike Davis returned my call concerning your question relative to the seeding of the Link Canyon pile while I was on vacation. He said that the pile was seeded last fall. Hope this helps.....there is a picture of the pile in the O drive images, 10/16 of the pile if you're interested. There is some new growth where moisture has been retained. The majority of the seed has not developed.....Mike is aware that they need to do additional reveg work there.....
