Wayne,
I received the above referenced letter today. I concur with the proposal to temporarily suspend routine subsidence and flow monitoring on the East Fork of Box Canyon during winter months of 2005. Flow measurements can be misleading due to frozen conditions and snow may cover new subsidence cracks. In addition, winter travel in the area tends to disturb wintering elk herds.

I would encourage continuation of monitoring in the spring, as soon meaningful information can be safely acquired per SUFCO's request.
