Subject: Biological Impacts / Quitchupah Creek / Dirty Water Discharge

I received a voice mail from Leroy Mead, UDWR / Price on Friday 12/16 relative to the Quitchupah Creek dirty water discharge on or about October 5. The UDWR fisheries biologist checked the channel at the confluence of Quitchupah Creek and Ivy Creek. The jist of the voice mail is that UDWR has no concern relative to impacts to any fish within that drainage, (not enough fines to impact any fish). Of course, this evaluation occurred approximately two months after the event. Most of the stuff has long been flushed down channel.

This E-mail should be documented in the file maintained for such items.
