Wayne:

Monitoring of those springs will satisfy our requirements. We have no problems now with the SITLA Muddy Tract Lease Amendment.

SITLA Muddy Tract Lease Amendment,
Canyon Fuel Company - Hydrology
Monitoring Program Changes

Dale,
In response to your July 2005 request (attached) to add additional monitoring locations to SUFCO's hydrologic monitoring plan, SUFCO has included the following springs: SP18, SP01 & SP02. We trust this will satisfy your request and finalize our consultation requirements for this permit amendment.
If you need additional information or clarification please advise. A confirmation from you would be appreciated. We hope to issue our approval of the SUFCO SITLA Muddy Tract lease this week.
Thanks again for your help.

Attachment: Outgoing File #2157

Wayne:

We have reviewed the lease amendment and have only one comment. Our range staff would like to have the water monitoring include spring SP018 and one or two out of SP01, SP02, SP012, and SP045. We do not have the flow data, so they should choose one or two of the dominant springs out of the four.

Please call me at (435) 636-3548 if you have any questions.
