Subject: November North Water Spring Results

Steve:

Please find attached to this e-mail two Excel files containing the results of water level measurements obtained from the piezometers in the North Water Spring (Pines 105) area and the flow measurements from Pines 310 upper and lower and Pines 311 springs. The data files have been updated to include measurements obtained during the month of November and measurements obtained on December 4th. I believe the 4th will be the last time we will be able to access the site this winter. Some of the well caps were frozen solidly to the casings and the road into the Joes Mill Pond area was inaccessible. There were no significant or unexpected changes in water levels measured.

If you have any questions regarding this data, please give me a call at (435) 448-2669.

Thanks,

Chris
