We attempted to monitor South Fork on the April 17, 19, 25 and 26. During this two week period the mine site received 1.5+” of precipitation in the form of rain. With the elevation being higher at South Fork, the precipitation was likely in the form of snow. We anticipate that we will be able to access South Fork for monitoring very soon.

If you have questions or require additional information please contact me.

Vicky Miller
