Todd,

As long as they are going to take care of subsidence as you described on the phone the other day I dont see any issues as this time with this project. Thanks for reaching out to us on it.

Hey TJ,

The SUFCO mine is looking to add another panel to their Pines east group. If you look on the attached map, you'll see it to the southwest of the three already-approved panels in the Pines Lease. It's oriented NW-SE as opposed to NE/SW like the others.

Like the other panels in the area, there is no surface disturbance with this one, the only surface threat would be due to subsidence, and there are some escarpments in the area. They completed a raptor survey, which I can send you if you'd like, and it didn't show any raptor activity nearby. If you've got any questions or concerns, please let me know as soon as you can.

Thanks!
