Re: Water Monitoring Revisions, Task ID# 6179, Canyon Fuel Company, LLC, Sufco Mine, C/041/002

Dear Sirs:

Enclosed with this letter are revisions to Chapter 7, associated with general text changes and revisions to the water monitoring plan commitments. Several changes to the monitoring plan reflect timelines written into the text, but not previously reflected in the monitoring tables. Plates 7-2, 7-3 and 7-10 have been modified and included. In addition, the water rights in Appendix 7-1 have been updated.

Please contact Vicky Miller at (435)636-2887 or vmiller@wolverinefuels.com if there are questions or additional information is needed.

Sincerely,

Vicky S Miller for

John D. Byars
General Manager
Sufco Coal Mine

APPLICATION FOR COAL PERMIT PROCESSING

Permit Change X New Permit ☐ Renewal ☐ Exploration ☐ Bond Release ☐ Transfer ☐

Permittee: Canyon Fuel Company, LLC
Mine: Sufco Mine **Permit Number:** C/041/002
Title: Water Monitoring Revisions, Task ID# 6179
Description, Include reason for application and timing required to implement:

Instructions: If you answer yes to any of the first eight (gray) questions, this application may require Public Notice publication.

☐ Yes X No 1. Change in the size of the Permit Area? Acres: _____ Disturbed Area: _____ ☐ increase ☐ decrease.
☐ Yes X No 2. Is the application submitted as a result of a Division Order? DO# _____
☐ Yes X No 3. Does the application include operations outside a previously identified Cumulative Hydrologic Impact Area?
☐ Yes X No 4. Does the application include operations in hydrologic basins other than as currently approved?
☐ Yes X No 5. Does the application result from cancellation, reduction or increase of insurance or reclamation bond?
☐ Yes X No 6. Does the application require or include public notice publication?
☐ Yes X No 7. Does the application require or include ownership, control, right-of-entry, or compliance information?
☐ Yes X No 8. Is proposed activity within 100 feet of a public road or cemetery or 300 feet of an occupied dwelling?
☐ Yes X No 9. Is the application submitted as a result of a Violation? NOV # _____
☐ Yes X No 10. Is the application submitted as a result of other laws or regulations or policies?
Explain: _____
☐ Yes X No 11. Does the application affect the surface landowner or change the post mining land use?
☐ Yes X No 12. Does the application require or include underground design or mine sequence and timing? (Modification of R2P2)
☐ Yes X No 13. Does the application require or include collection and reporting of any baseline information?
☐ Yes X No 14. Could the application have any effect on wildlife or vegetation outside the current disturbed area?
☐ Yes X No 15. Does the application require or include soil removal, storage or placement?
☐ Yes X No 16. Does the application require or include vegetation monitoring, removal or revegetation activities?
☐ Yes X No 17. Does the application require or include construction, modification, or removal of surface facilities?
X Yes ☐ No 18. Does the application require or include water monitoring, sediment or drainage control measures?
X Yes ☐ No 19. Does the application require or include certified designs, maps or calculation?
☐ Yes X No 20. Does the application require or include subsidence control or monitoring?
☐ Yes X No 21. Have reclamation costs for bonding been provided?
☐ Yes X No 22. Does the application involve a perennial stream, a stream buffer zone or discharges to a stream?
☐ Yes X No 23. Does the application affect permits issued by other agencies or permits issued to other entities?

Please attach one (1) review copy of the application.

I hereby certify that I am a responsible official of the applicant and that the information contained in this application is true and correct to the best of my information and belief in all respects with the laws of Utah in reference to commitments, undertakings, and obligations, herein.

Jacob Smith, Engineering Manager, 9/17/20

APPLICATION FOR COAL PERMIT PROCESSING
Detailed Schedule Of Changes to the Mining And Reclamation Plan

Permittee: Canyon Fuel Company, LLC
Mine: Sufco Mine **Permit Number:** C/041/002
Title: Water Monitoring Revisions, Task ID# 6179

Provide a detailed listing of all changes to the Mining and Reclamation Plan, which is required as a result of this proposed permit application. Individually list all maps and drawings that are added, replaced, or removed from the plan. Include changes to the table of contents, section of the plan, or other information as needed to specifically locate, identify and revise the existing Mining and Reclamation Plan. Include page, section and drawing number as part of the description.

			DESCRIPTION OF MAP, TEXT, OR MATERIAL TO BE CHANGED

***Not Listed in EA**

Greens Hollow Tract

The description is based on and extensive three year study of the Muddy Creek area and a 2-mile buffer surrounding the tract performed by Cirrus in 2004 and the continuation of sampling by the Permittee. Springs were identified as occurring in the Castlegate, Price River and North Horn formations. "The overall risk for permanent water loss at any spring located within the tract should be relatively low" (FSEIS, 2015).

Cirrus- A total of 33 springs were measured for flow and various parameters during the spring and fall seasons for 2001 to 2004. A summary of the collected data in included in the Tables 2A & B located in the PHC Tables. Water quality samples were collected for laboratory analysis from eight springs during 2001 - 2004. The field parameter monitoring results for the springs indicate that the relevant criteria for the State of Utah with the exception of dissolved oxygen, which is typically low in springs. Laboratory analysis met the relevant criteria except for some slight exceedances in arsenic, cadmium, lead, TDS, selenium and zinc. Based on the knowledge of local geology and soil the water chemistry reflects natural conditions.

The permittee continued monitoring selected springs and surface water locations shown on Plates

Surface Water

Link 002	2005 - Present	44	0	0	N	1

* Issue from Castlegate Sandstone

Monitoring data for groundwater sampling locations GW-21, Pines 100, Pines 310, Pines 311, Link Portal East, and Link Portal West are available for review in the DOGM Water Database.

Baseline data collected for the Muddy Tract area is located in the "Coal Tract Evaluations on the Manti-La Sal National Forest" report prepared for the Manti-La Sal National Forest by Cirrus Ecological Solutions, LC. Those springs identified and found within the Muddy Tract in the above referenced publication are labeled on Plate 7-3 with the prefix "M- ".

Sampling for the SUFCO Mine and adjacent areas is accomplished in accordance with the schedule outlined on Tables 7-2 through 7-5A. Sampling for the waste rock disposal site is accomplished in accordance with the schedule and the parameter list as outlined in Chapter 7 of the Waste Rock Volume of this M&RP.

Groundwater monitoring data are submitted to UDOGM by the end of the quarter following sampling. Monitoring data are submitted in an annual summary by March 31 of the subsequent year.

Groundwater monitoring will continue through the mining and post-mining periods until bond release. The monitoring requirements, including the analytical parameters and the sampling frequency may be modified in the future in consultation with the UDOGM if the data demonstrates that such a modification is justified.

Groundwater monitoring wells US-77-7, US-77-8, US-77-9, US-79-9, US-79-10, US-79-13, US-79-12, US-80-4,US-81-1, US-81-2, US-81-3, US-81-4, 89-16-1, 89-16-1W, 89-18-1, 89-20-1, 89-20-2, 89-20-2W, and 89-21-1 have been removed from the operational monitoring plan and are listed as historic monitoring wells because these are old baseline wells, wells that have been discontinued or wells the water level measurements are not possible due to the collapse or blockage of the casing.

A table presenting data for monitoring wells US-79-13, US-80-4, US-81-3, US-81-4 and 89-20-2 is in Appendix 7-4. The table describes location; number of samples; years sampled; and maximum and average depth of each well. The table also lists the number of years since mining has ceased in the area of the wells. Wells US-80-4, US-81-3 and US-81-4 are blocked but have continued to be monitored for many years. Well US-79-13 has been monitored 34 times with a variance between the maximum depth and average depth of <2% and well 89-20-2W has been measured 70 times also with a variance of <2%. The measurements demonstrate the lack of impact to these well caused by mining.

These historic monitoring wells will be permanently sealed along with all the operational groundwater monitoring wells during the final reclamation of the mine in accordance with Sections 6.3.1 and 7.4.8.

In addition to gathering ground water samples from seeps and springs at the surface, SUFCO will obtain a ground water sample, if ground water is encountered, in-mine within the proposed 150 acre lease expansion located in T21S, R5E, Section 10. This sample will be taken shortly after the start-up of the longwall and will be age-dated using isotopic analysis methods. After the longwall advances through approximately 50% of the panel length within the 150 acre lease expansion, a second ground water sample will be obtained from the face and analyzed for the same parameters. The results of the analysis and a sample location map will be submitted to the Division.

Total hardness, total alkalinity, dissolved iron, and dissolved manganese were not included in the groundwater operational monitoring plan proposed by Mayo and Associates (Appendices 7-17 and 7-18). The reasons for excluding these parameters are discussed below:

- Mayo does not believe that total hardness is a necessary parameter in the operational monitoring plan. Total hardness describes the soap-consuming capacity of water but has very limited value in geochemical studies. This parameter is generally calculated from the milliequivalent concentrations of Ca^{2+} and Mg^{2+}. Because Ca^{2+} and Mg^{2+} are included in the operational monitoring plan, the parameter could be calculated if it were ever necessary to evaluate total hardness.

- Mayo does not believe that total alkalinity should be included in the operational monitoring plan. In the waters of Wasatch Plateau, total alkalinity is almost exclusively the product of bicarbonate and carbonate alkalinity. Both bicarbonate and carbonate alkalinity are included in the operational monitoring plans. Contributions to alkalinity from hydroxide, silicate, borate, and organic ligands are trivial.

- Mayo did not include dissolved iron and dissolved manganese in the operational monitoring plan because iron and manganese do not readily exist in dissolved form in basic (pH>7) waters but exist instead as hydroxide complexes. All waters in the leased area are basic. Measurements of total iron and manganese quantify both the dissolved and complex forms of these elements.

Equipment, structures and other devices used in conjunction with monitoring the quality and quantity of groundwater in the permit and adjacent areas have been installed, maintained, and operated in accordance with accepted procedures. This equipment will be removed or properly abandoned by SUFCO when no longer needed.

Groundwater Monitoring Adjustments Quitchupah and Muddy Drainages – The elimination of monitoring and associated justification is provided for GW-8, GW-9, GW-13, Mud Spring, Broad Hollow, Wedge, Amanda and 94-113 spring sites. The justification includes no impact to sites, their flow or chemistry; the sites were used for baseline comparison and no mining occurred beneath or adjacent to them; mining has ceased for a time sufficient to indicate no additional impact need be considered. A table presenting data for monitoring of sites GW-8, GW-9, GW-13, Mud Spring, Broad Hollow, Wedge, Amanda and 94-113 is in Appendix 7-4. The table describes location; number of samples; years sampled; flow data and the analysis for various parameters. The table also lists the number of years since mining has occurred in the area of these springs. Mud Spring and 94-113 have been dry multiple times, the remainder of the listed springs flow regularly with very little variation. No mining occurred beneath GW-8, GW-9, Broad Hollow and 94-113 springs. The elimination of these springs will not significantly impact the hydrologic knowledge or understanding for the area, because mining has ceased or has never occurred at these sites. Collected information does not demonstrate impacts to these springs. Additional information for the spring sites is located on the UDOGM website under hydrology.

During the permitting of the South Fork Lease two sites were added which upon investigation have been determined to be sites previously monitored. Site 94-1397 (water right number) designated for monitoring in the South Fork Drainage is actually located in the North Fork Drainage. Roberts Spring is the most prominent spring in the drainage where the 94-1397 label was mistakenly placed on Plate 7-3. The correct water right number in the drainage is 94-1390/94-112 and corresponds with Roberts Spring which was monitored from 2011 thru 2018. Roberts Spring is not located above or immediately adjacent to mine workings thus limiting any impact from mining. The permittee intends to not reinstate Roberts Spring (94-1390/94-112) as a monitoring location.

The second site is the South Fork Quichupah Creek Lower which corresponds to historic flow at Sufco 006 and Water Right 94-1396. Sufco 006 has been monitored for 40 years, with no impacts from mining evident during the period of monitoring. The permittee plans to place the reference of South Fork Quichupah Creek Lower with monitoring site Sufco 006 and continue to record the measurements as Sufco 006 in the UDOGM water database.

***Added to the monitoring plan in 2019 and monitoring will cease following the 4th Quarter of 2024 after mining of the Pines East panels.
* Monitoring point 406B is located at an old USGS monitoring location (circa 1999) located in the NW1/4NE1/4, Sec. 21, T21S. R6E.
Should a spring listed in Table 7-2 change locations, the Division will be notified in the note section during the entry of the quarterly data into the Division's database.

TABLE 7-3
Field and Laboratory Measurement Protocol

Water level and flow measurements

A Monitoring well: quarterly water level measurement (3 quarters per year)
B Monitoring well: annual water level measurement (3rd quarter)
C Stream: quarterly discharge measurements (3 quarters per year)
D Spring: quarterly discharge measurements (3 quarters per year)

E	Spring Pool:	quarterly water level measurement (3 quarters per year)
F	Stream:	Bi-weekly measurements while mining is occurring under the stream in 2013, thereafter quarterly for two years (SUFCO 006 A - D).
G	Stream:	Identify perennial portion of stream on or near October 1 of each year.
H	Spring:	Quarterly measurements while mining is occurring under the 2R2S panel stream in 2013, thereafter quarterly for two years (Wedge Spring, Amanda Spring, 94-113 See, 006A, Roberts Spring, RS-A, RS-B).

Water quality (3 quarters per year)

1	Stream: quarterly surface water quality field measurements
2	Stream: quarterly surface water quality operational laboratory measurements
3	Spring: quarterly groundwater quality field measurements
4	Spring: quarterly groundwater quality operational laboratory measurements
5	Spring: groundwater quality operational laboratory measurements quarterly for two (2) years, then reverting to quarterly water quality field measurements
6	Stream: flow measurements only, no water quality samples required.
7	Spring: initially ground water field measurements June 2006 through December 2006 as accessible then quarterly groundwater field measurements thereafter.
8	Stream: quarterly surface water quality field measurements and analysis for total dissolved solids, total suspended solids, total iron, total manganese.
9	Spring: quarterly ground water quality field measurements and analysis for total dissolved solids, total iron, total manganese.
10	Monitoring in 2nd Quarter only for ground water quality field measurements and analysis for total dissolved solids, total iron, total manganese.
+	Turbidity will be measured.

Monitoring protocol (2020) has been changed because information has been gathered for sufficient time to demonstrate that impacts associated with mining (sites M-SP 5, 9, 15, 19, 40,104, 105, 106, Horse Creek, Muddy Creek below Horse, Cowboy Creek Top, Middle & Bottom; Muddy ABF) have not occurred and are not likely to occur in the future (Item 1, 3). In addition, once baseline requirements are met (sites Hansen Seep, 94-110, Spring 99, Skutumpah Spring, A & B Spring, Divide Spring, Muddy Creek above Horse, URGH, ULGH, North Fork Upper & Middle; CPC Lower, Middle & Upper; SP60 Creek, Pines 405, Sufco 046) the monitoring protocol has been minimized to the required parameters listed in Sections 724.100 and 731.200 of the DOGM R645 Regulations(Items 8,9). The Item 10 change related to Link Canyon's four monitoring locations is due to 13 years of "no flow" measurements,

demonstrating that impacts by mining are limited, when there is no data available for evaluation. Statistically, monitoring during the 2nd Quarter will provide the most opportunity for sampling.

Surface Water Monitoring. Surface water monitoring is conducted in the SUFCO Mine permit and adjacent areas based upon the monitoring plans contained in Tables 7-2 through 7-6. Surface water monitoring locations are identified in Plate 7-3. The parameters monitored meet the requirements of R645-301-731.222.1, 40 CFR 122 and 123, R645-301-751, and the applicable UPDES permits. These tables are based on studies done by Mayo (Appendices 7-17 and 7-18) and supersede previous plans. For clarification of the apparent discrepancies over the classification of stream-monitoring site 047A in the M&RP and the Mayo report (Appendix 7-17) which identified site 047A as a spring-monitoring site. SUFCO has always called the station a surface water monitoring site because samples are taken in a drainage. However, Mayo

called this site a spring in their report and recommended monitoring plan. When Mayo first collected samples from the site, they were surprised to learn that water from this site had essentially no tritium. Modern surface waters contain abundant tritium. They visited this site again in June 1996 and located several springs in the drainage several hundred feet above where samples are collected and classified the site as a spring-monitoring site. Nevertheless, Mayo now agrees with SUFCO that this site should be considered a surface water site for monitoring purposes because, at times, this drainage has flow which is contributed by snow melt, precipitation, or sediment pond discharge.

Monitoring sites are sampled three times per year. Surface water monitoring data are submitted to UDOGM through the Division's database by the end of the quarter following sampling. ~~Monitoring data are submitted in an annual summary by March 31 of the subsequent year.~~ UPDES reporting requirements will be met for the three UPDES discharge sites at the mine (see Appendix 7-7).

To better understand the effects that mining will have, if any, on the stream flows within Box Canyon, surface water monitoring sites Pines-407 and Pines-408 will be monitored for stream flows in gallons per minute once every week during the months of June, July, August, September, and October in 1999. Starting in the year 2000, sites 407 and 408 will be monitored once a month in July, August, September, and October for a five year period. If analysis of the data shows no significant changes during this time period, monitoring at these points will be eliminated from the water monitoring program on Table 7-2. Flow measurements at these two sites will be obtained on the same day. Also, the operator will endeavor to obtain the required samples at least five days after the last precipitation event in the drainage area.

To better understand the effects that mining will have, if any, on the stream flows within the South Fork of Quitchupah, surface water monitoring sites SUFCO 006A and SUFCO 006B will be monitored quarterly starting in 2010 for stream flows in gallons per minute and once every two weeks when accessible while mining is occurring within the 15 degree angle-of-draw of the stream channel. Two additional surface water monitoring sites will be monitored quarterly,

SUFCO 006C starting in 2011 and SUFCO 006D starting in 2012. Once mining has been completed within the angle-of draw, the sites will be monitored on a quarterly basis for two years after mining has progressed past the 15 degree angle-of-draw. If analysis of the data shows no significant changes during this time period, monitoring at these points will be eliminated from the water monitoring program on Table 7-2. Flow measurements at these four sites will be obtained on the same day.

Areas identified on Plate 7-3 as FP-1 and FP-2 will be monitored on or near October 1 of each year to determine the extent of perennial stream flow, if any, present in the East Fork of the Main Fork of Box Canyon Creek and the East Fork of the East Fork of Box Canyon Creek, respectively. Stream flows will be obtained a short distance below the point where the streams become perennial and the location will be mapped.

Monitoring points Pines 106 and USFS 109 are located at or near the points which the streams become perennial in the East Fork of Box Canyon Creek and the Main Fork of Box Canyon Creek, respectively. The drainages in the area of these two points will be monitored on or near October 1 of each year to verify and map the location where the streams become perennial. Flows will be obtained at Pines 106 and USFS 109 on or near October 1.

Data gathered from monitoring points Pines 407, Pines 408, FP-1, FP-2, Pines 106, and USFS 109 will be compared with precipitation data collected from the mine site weather station, and any other appropriate nearby station, to aid in determining if there have been any mining-related effects on the perennial flows. The flow data, perennial stream flow maps, and the results of the weather data/flow data comparison will be submitted in the annual report through 2019~~ fourth quarter water monitoring report each year.~~

Surface water monitoring will continue through the mining and post-mining periods until bond release. The monitoring requirements (except those required by UPDES) may be modified in the future in consultation with UDOGM if the data demonstrate that such a modification is justified.

stream flow will be obtained. The approximate locations of these sites are illustrated on Figure 7-9. The once every other week flow measurements will be supplemented by visual observations of flow performed twice a week or once every three to four days. Flow/no flow conditions will be described on these days. If no flow or diminished flows are noted, the appropriate mine and Forest personnel will be contacted and the mitigation plan to restore flows will be implemented.

Semi-weekly flow observations and visual inspections will continue for at least 12 weeks, or as conditions allow, after the completion of mining under the stream channel. The bi-weekly (once every two weeks) stream flow monitoring will continue for at least four weeks, or as conditions and monitoring results indicate necessary, after the completion of subsidence mining under the stream channel. The monitoring plan will then change to quarterly flow and field parameter measurements for two years at four sites: one upstream of the panel, one within the panel, and two downstream of the panel. The location of these new temporary monitoring sites are listed in Table 7-2 and shown on Plate 7-3 and labeled as sites 006A, 006B, 006C and 006D. Additional flow monitoring may be needed to determine specific locations where flow is being lost, and treatments are needed. Sites 006A, 006B, 006C and 006D were eliminated from the monitoring program in 2018 thru 2020. Site 006D was monitored during the mining beneath the South Fork of the Quitchupah which ceased in 2015. The variable flow at 006D consists of flow from several springs, precipitation and a major spring controlled by the USFS. Flow information and a variety of analyses are provided on the Water Information Table 2020 in Appendix 7-4 and in the UDOGM hydrology database.

Mining ceased beneath the South Fork of Quitchupah Creek in March 2015 (Panel 3R2S) and per the mitigation plan the weekly monitoring obligation for the ponds, springs and channel upstream of the culvert road crossing ceased on June 30, 2017. Flow data (DOGM database) has provided justification for discontinuing the monitoring. The channel, riparian vegetation and springs appear to be stable and unaffected by subsidence associated with underground mining. Ponds 94-1394, 94-982 and 94-115 have shown no effect from mining in the area of the South Fork of Quitchupah and therefore monitoring was discontinued on June 30, 2017. Weekly water monitoring (per the mitigation plan) will continue thru the Fall of 2017 from the culvert road crossing downstream to the confluence of the North and South Fork of Quitchupah Creek, as will the search for and repair of mining-induced subsidence damage.

Locations for surface water monitoring above and below the coal panels within the Greens Hollow Lease are shown in Appendix 7-27 on Figure 1, Plate 7-3, Plate 7-10 and Table 9 of the PHC. The monitoring of the above and below sites began in the first quarter of 2017. A description of the monitoring program for the above and below sites is provided in Table 7-2.

Surface Water Monitoring Adjustments Quitchupah and Muddy Drainages - Pines 302 monitoring is being discontinued following 19+ years of monitoring. Fifty-eight samples and there has been no mining activity beneath or immediately adjacent to the site to support the need to continue the monitoring.

Site 006D monitoring is being discontinued following 7 years of monitoring. Mining was discontinued over five years ago and any associated subsidence has ceased. The surface water monitoring sites above the 006D confluence with the North Fork of Quitchupah have been discontinued previously and often the variable flow leaves the location dry. The monitoring of Amanda and Wedge springs above 006D are also being discontinued in 2020.

7.3.1.3 Acid- and Toxic-Forming Materials

Results of monitoring of mine discharge, surface, and groundwater, indicate that no impact to these waters from acid- and toxic-forming materials has been found in the permit and adjacent areas (Section 7.2.8.3). Parameters defining acid- and toxic-forming materials continue to be monitored as described in the Waste Rock Volume of this M&RP. In the event that acid- or toxic-forming materials are identified, they will be disposed of in the waste rock disposal area.
The treatment of these materials will be handled as indicated in the Waste Rock Volume of this M&RP.

7.3.1.4 Transfer of Wells

Before final release of bond, exploration or monitoring wells will be sealed in a safe and environmentally sound manner in accordance with R645-301-631, R645-301-738, and R645-301-765. Ownership of wells will be transferred only with prior approval of the UDOGM. The conditions of such a transfer will comply with State and local laws. SUFCO will remain responsible for the

ORDER OF THE STATE ENGINEER
For Temporary Change Application Number 94-440 (t38624)

Temporary Change Application Number 94-440 (t38624) in the name of USA Forest Service, was filed on December 14, 2012, to add a point of diversion and place of use of water as evidenced by Water Right Number 94-440. Heretofore, the water has been diverted from a point directly on a stream flowing through sections 3, 10 and 11, T21S, R5E, SLB&M. The water was used for the stockwatering requirements of 1367 head of livestock (group total - in cattle or horses or equivalent species) from June 16 to September 30. The water was used in all or portion(s) of Section 3, T21S, R5E, SLB&M; and Section 11, T21S, R5E, SLB&M.

Hereafter, it is proposed to divert 11.23 acre-feet of water from the same point as heretofore and from an additional spring located South 615 feet and West 2075 feet from the SE Corner of Section 3, T21S, R5E, SLB&M. The nature of use of the water will remain the same as heretofore. The place of use of the water is to remain the same as heretofore, but adding all or portion(s) of Section 3, T21S, R5E, SLB&M; Section 11, T21S, R5E, SLB&M; Section 12, T21S, R5E, SLB&M; and Section 14, T21S, R5E, SLB&M.

Notice of this temporary change application was not published in a newspaper. It is the opinion of the State Engineer that it meets the criteria of Section 73-3-3 of the Utah Code for the approval of temporary change applications.

This application shall automatically expire one year from the date of this approval.

If historical resources such as human remains (skeletons), prehistoric arrowheads/spear points, waste flakes from stone tool production, pottery, ancient fire pits, historical building foundations/remains, artifacts (glass, ceramic, metal, etc.) are found during construction, call the Utah Division of State History at 801-533-3555.

It is the applicant's responsibility to maintain a current address with this office and to update ownership of their water right. Please notify this office immediately of any change of address or for assistance in updating ownership.

Your contact with this office, should you need it, is with the Southeastern Regional Office. The telephone number is 435-613-3750.

This Order is subject to the provisions of Administrative Rule R655-6-17 of the Division of Water Rights and to Sections 63G-4-302, 63G-4-402, and 73-3-14 of the Utah Code which provide for filing either a Request for Reconsideration with the State Engineer or an appeal with the appropriate District Court. A Request for Reconsideration must be filed with the State Engineer within 20 days of the date of this Order. However, a Request for Reconsideration is

not a prerequisite to filing a court appeal. A court appeal must be filed within 30 days after the date of this Order, or if a Request for Reconsideration has been filed, within 30 days after the date the Request for Reconsideration is denied. A Request for Reconsideration is considered denied when no action is taken 20 days after the Request is filed.

Dated this 26 day of December, 2012.

Marc K. Stilson, P.E., Regional Engineer
