RE: Vegetation Studies, Summit Minerals, Inc., Summit Minerals #1 Mine, INA/043/001, Folder #2 and #13, Summit County, Utah

On August 28, 1986, I met on site with Richard Kopp and Mary Boucek to determine the location of vegetation reference area(s) for the reclamation plan.

After examination of the site and the surrounding vegetation, it was determined that one reference area of ca. 2 acres in size would be adequate to characterize the vegetation and provide an adequate revegetation standard for the current disturbance. The area selected is about 50 yards south of the existing disturbance on the west side of the property and will be ca. 500 feet x 175 feet in area.

Mary provided me with a letter dated August 27, 1986 which summarizes her intended sampling methodology. This was reviewed and found to be acceptable.
