RE: Boyer Mine
Prep Plant Facility

Dear Mr. Braxton;

The new prep plant facility that we discussed by phone conversation, incorporated the use of a jig type separator.

The separator was test run for two days, and was found to be inadequate for our system.

We are now considering the use of a dry type separator, and therefore omit the use of water.

Blackhawk Engineering was instructed to submit the necessary paper work to your office.

If any more information is required, please give me a call.
